

Mainsaver Software Provides Asset Management Solution to Canadian Green Energy Producer

San Diego, CA and Vienna, Ontario – December 11, 2018; Canadian Clean Power producer Capstone Infrastructure has added Mainsaver Enterprise Asset Management software to 11 additional wind and solar energy production facilities. Mainsaver Software is used to manage the maintenance and repair of the production and transmission asset base including wind turbines and solar cells. Mainsaver is used for material management and procurement as well.

The 11 new facilities have been setup in the Mainsaver Multi-Plant database schema which allows the administrator to control access to the data for each plant. The new plants join Capstone Infrastructure site Erie Shores Wind Farm which has used Mainsaver since 2013. The flexibility of Mainsaver allows for the enterprise to purchase materials and services on a centralized or local plant basis. Additionally, the visibility of common spare parts across the asset base allows maintenance techs to quickly locate parts and complete repairs.

Mainsaver Software provides a turnkey solution for Capstone Infrastructure which includes cloud based application hosting, data services and onsite training. The mobile workforce can access Mainsaver using Windows computers or web enabled devices in the office or the field utilizing the Mainsaver Connect mobility module.

Renewable energy production is predicted to grow at a rate higher than traditional fossil fuel plants. The reasons for this include;

- 1- Public demand for cleaner energy production
- 2- Lower cost of clean energy technologies
- 3- Government incentives for clean power production
- 4- Renewable energy reduces reliance on finite fossil fuels and carbon emissions

The Multi-Plant database allows for quickly adding additional plants as Capstone Infrastructure brings on new projects. Future plans include expansion of Mainsaver to Nova Scotia and a facility in Alberta.

About Capstone Infrastructure

Capstone Infrastructure Corporation is an independent, pure-play power producer focused on providing clean, renewable energy to homes and businesses across North America. Capstone currently owns, operates and develops thermal and renewable power generation facilities with a total installed capacity of net 541 megawatts.

About Mainsaver

Mainsaver offers a complete Enterprise Asset Management Solution with a robust Computerized Maintenance Management System (CMMS) at its core. As one of the industry's foremost established CMMS suppliers, Mainsaver provides solid software applications, trusted consulting services, and comprehensive customer support to its clients. Our solutions are designed to provide a maximum return on investment, whether installed as a standalone application, or as an "end to end" solution interfaced to any of today's popular ERP, MRP or financial packages.
