

Titleist Ball Plants Upgrade Mainsaver

Fairhaven, MA – March 14, 2019 ; The Titleist brand of golf equipment is synonymous with high performance and quality. The three plants that produce the legendary Titleist golf balls including the venerable Pro V1 line all use Mainsaver Enterprise Asset Management software to manage equipment and spare parts inventory. Mainsaver has been in use for almost 20 years at Titleist and has been upgraded to version 12.9 this year.

Mainsaver is an essential tool for the maintenance supervisors. All corrective and preventive maintenance is scheduled with maintenance as well as outage planning. Stock materials are setup with order points and the stock coordinator is notified by email when an item reaches order point.

The 3 plants operate with the same theme of performance and quality that their products exude. The plants are spotless, organized and show all the results of a rigorous 5S quality type program. Mainsaver complements the quality efforts in this plant to help achieve excellence in maintenance.

About Titleist and Acushnet

Acushnet is one of the largest manufacturers of golf equipment in the world. The company has the #1 market share in balls, shoes and gloves on each of the worldwide professional golf tours, as well as in the on and off course golf shops. There are five product lines (balls; clubs; shoes; gloves and accessories) sold under the brand names (Titleist; FootJoy; and Pinnacle). The company sells its products through five primary channels of distribution: on course pro shops (“green grass”); off course golf shops; sporting goods stores; mass merchants; and the corporate custom channel for logo golf balls. (GOLF:NYSE)

About Mainsaver Software

Mainsaver Software offers a robust and comprehensive Computerized Maintenance Management System (CMMS) that provides an end-to-end solution within an integrated Enterprise Asset Management (EAM) framework. With over 35 years of expertise in providing CMMS solutions, Mainsaver has an extensive and diverse customer base that includes, Power Generation, Food and Food Services, Federal and Local Governments, Educational Institutions, and numerous others.
